CARBON REDUCTION PLAN GUIDANCE

Notes for Completion

Where an In-Scope Organisation has determined that the measure applies to the procurement, suppliers wishing to bid for that contract are required at the selection stage to submit a Carbon Reduction Plan which details their organisational carbon footprint and confirms their commitment to achieving Net Zero by 2050.

Carbon Reduction Plans are to be completed by the bidding supplier¹ and must meet the reporting requirements set out in supporting guidance, and include the supplier's current carbon footprint and its commitment to reducing emissions to achieve Net Zero emissions by 2050.

The CRP should be specific to the bidding entity, or, provided certain criteria are met, may cover the bidding entity and its parent organisation. In order to ensure the CRP remains relevant, a Carbon Reduction Plan covering the bidding entity and its parent organisation is only permissible where the detailed requirements of the CRP are met in full, as set out in the Technical Standard² and Guidance³, and all of the following criteria are met:

- The bidding entity is wholly owned by the parent;
- The commitment to achieving net zero by 2050 for UK operations is set out in the CRP for the parent and is supported and adopted by the bidding entity, demonstrated by the inclusion in the CRP of a statement that this will apply to the bidding entity;
- The environmental measures set out are stated to be able to be applied by the bidding entity when performing the relevant contract; and
- The CRP is published on the bidding entity's website.

Bidding entities must take steps to ensure they have their own CRP as soon as reasonably practicable and should note that the ability to rely on a parent organisation's Carbon Reduction Plan may only be a temporary measure under this selection criterion.

The Carbon Reduction Plan should be updated regularly (at least annually) and published and clearly signposted on the supplier's UK website. It should be approved by a director (or equivalent senior leadership) within the supplier's organisation to demonstrate a clear commitment to emissions reduction at the highest level. Suppliers may wish to adopt the key objectives of the Carbon Reduction Plan within their strategic plans.

A template for the Carbon Reduction Plan is set out below. Please complete and publish your Carbon Reduction Plan in accordance with the reporting standard published alongside this PPN.

¹Bidding supplier or 'bidding entity' means the organisation with whom the contracting authority will enter into a contract if it is successful.

Carbon Reduction Plan

Supplier name: Torrent Pharma (UK) Limited.

Publication date: 12th December 2025

Baseline Emissions Footprint

Baseline emissions are a record of the greenhouse gases that have been produced in the past and were produced prior to the introduction of any strategies to reduce emissions. Baseline emissions are the reference point against which emissions reduction can be measured.

Baseline Year: 2019	
Additional Details relating to the Baseline Emissions calculations.	
None	
Baseline year emissions: 2019	
EMISSIONS	TOTAL (MtCO₂e)
Scope 1	31,474
Scope 2	98,066
Scope 3 (Included Sources)	154,837 (Base Line Year 2025)
Total Emissions	129,540 (Excluding Scope 3)

Current Emissions Reporting

Reporting Year: 2025	
EMISSIONS	TOTAL (MtCO₂e)

Scope 1	8,937
Scope 2	78,592
Scope 3 (Included Sources)	154,837
Total Emissions	Scope 1 & Scope 2 - 87,529

Historic Track Record

Carbon Reduction Projects

Carbon Emission and Energy Management

- We continue to make substantial progress in reducing carbon emissions through energy-efficient practices and the adoption of renewable energy sources.
- Our company has set ambitious targets to lower our carbon footprint across all operations.
- A key area of focus has been the reduction of Scope 1 emissions (direct emissions from owned or controlled sources) and Scope 2 emissions (indirect emissions from the generation of purchased electricity), reflecting our commitment to responsible and sustainable business practices.

Approach and Initiatives

- Energy-efficient Measures: Installation of energy-efficient equipment, utilisation of advanced technology in HVAC systems, and maintenance of power factors across units.
- Renewable Energy Initiatives : Adoption of solar power and wind energy systems.
- Carbon Footprint Reduction: Transitioning from fossil fuels to biofuels and increasing the use of renewable sources.

Other Energy Efficiency Initiatives Taken during the Year

- Dahej Facility
 - 1 MW new solar roof top system commissioned leading to green energy generation of 1.2Mn+ kWh annually.
 - Installed new technology chiller condenser tube cleaning system to improve the energy efficiency of chiller system resulted into annual saving of 60,000 kWh.
 - Installation of two heat pumps for hot water generation and reduction in steam consumption.
- Indrad Facility
 - Replacement of old centrifugal chiller with energy efficient new chiller. This resulted in energy conservation by 0.14 Million kWh.
 - Optimisation of Nitrogen generation plant in central utility which resulted in annual savings of 96,000 kWh.
 - Existing surface aerators replaced with new tubular type diffuser system in ETP which resulted in annual savings of 80,000 kWh.
- Baddi Facility
 - Synchronisation of all DG Sets by laying common Bus duct, coupler, communication cable and calibration of individual controller (parameter settings) for load sharing & energy conservation.
 - Replacement of HSD forklift with electric forklift resulted into annual saving of 5,000 litres HSD.
- Bileshwarpura Facility

- Replacement of 3 conventional blowers with Electronically Commutated blowers in AHU resulted into annual energy saving of 0.15 Million kWh.

In addition to above mentioned initiatives during the year we have undertaken various measures to optimise and improve energy efficiency at all facilities resulting into annual reduction of 0.36 million kWh.

Scope 3 Emissions

- We have undertaken an assessment of the 15 categories of Scope 3 emissions as per the GHG Protocol to determine the relevance of each category to our business. Out of 15 categories, we are reporting under 10 categories based on nature of company's operations and significance. Our Scope 3 emissions intensity (tCO₂e/H crores of Revenue) for 2024-25 was 16.32 as compared to 18.50 in 2023-24

Declaration and Sign Off

This Carbon Reduction Plan has been completed in accordance with PPN 06/21 and associated guidance and reporting standard for Carbon Reduction Plans.

Emissions have been reported and recorded in accordance with the published reporting standard for Carbon Reduction Plans and the GHG Reporting Protocol corporate standard and uses the appropriate Government emission conversion factors for greenhouse gas company reporting.

Scope 1 , Scope 2 and Scope 3 emissions have been reported in accordance with Indian regulations and can be found in the group Annual report.

This Carbon Reduction Plan has been reviewed and signed off by the General Manager of Torrent Pharma (UK) Limited.

Signed on behalf of the Supplier:
